

PLAY WITH YOUR MATE!

To play Caveman Craig with a pal, you'll need a controller that is HID compatible.

As a general rule, Xbox controllers should work on both Windows & Mac without additional software or drivers, but PlayStation controllers require third party drivers such as SCP or DS3tool on Windows.

Once you hook up your controller, click on the 'players' icon on the main screen to switch to co-op, then choose a Survival or Conquest level to play!

HAVING PROBLEMS?

If you have an incompatible controller or just can't get the darn thing working, we have a workaround!

Player two can also use the numpad keys on the keyboard, or you could map these keys to your controller using third party software (such as Joy2Key: <http://joytokey.net/en/>).

Use the table below to map the numpad keys to your controller:

NUMPAD KEY	ACTION
Numpad 4	Walk left
Numpad 6	Walk right
Numpad 8	Pick up rock
Numpad 5	Action (harvest, drag, etc)
Numpad 7	Attack (throw rock / club)
Numpad 9	Dodge
Numpad +	Toggle follow
Numpad 0	"Start" (used to pick these controls on the 'Press Start!' screen)
